Comments: I am a resident of Park City and have a child in the Park City School District. I am concerned about the money from the mine being equally distributed to the impacted areas. Since the mine implemented its bus/transportation, Park City has seen an increase in the number of mine families that live here in our community, even with the big layoff. In addition, the valuation of what the average home value should be investigated. The values have changed significantly since 1998. We purchased our home in 2001 for \$97500 and now it is valued by the Department of Revenue at over \$382,000. There is a huge difference between those numbers. That impacts the amount of funds the school gets. Our school has had a difficult time keeping up with costs and enrollment changes for several years that the mine has failed to recognize the impact on our outlying community. I hope that you will take these things into consideration and correct the imbalance of funds to impacted communities.
