Comments: I have a masters in ecological restoration and mining on this scale will be noticeable for hundreds of years. The reason why this site is being picked is mainly to make a point about this administrations anti-public lands agenda, using this and the Bears Ears monument as examples of their efforts to undermine the American citizen, humiliate the knowledgeable and educated people who work daily to manage and protect these places, to make another member of this group more wealthy, and to use the existing infrastructure and roads and water so Rare Element Resources Inc can save money, put the bulk of the burden on the taxpayer, submit a smaller mining bond, and use substandard mitigation and remediation techniques so that the lions share of the recovery costs will be paid by the federal government.
