Comments: Do not approve this mine.

Do not let 1,060 acres of pristine, protected wild lands and 640 of private lands be desecrated by this project.

We all know how this turns out, should this mine be approved. Mines worsen local air quality; they increase potential exposure to radioactive or hazardous elements; they desecrate sacred sites which are the true American heritages. This mine would negatively impact all wildlife species and habitats, including northern long-eared bats. Mines put stress on local water resources and pollute water quality through acid rock drainage. Mines destroy the health of the people through increased radiation risks associated with processing rare earth-bearing mineral deposits.

Do not approve this mine. It is not worth the short term gain. People of conscience are relentless, angry, and tired by this administrations arrogant desecration of public lands. Do not be part of the history that leaves that legacy. Stand up and protect the wilds that sustain the human spirit. We are counting on you.
