Last name: Leavitt

Organization:

Title:

Comments: I object to the use of herbicides in this project as they are detrimental to All terrestrial life, including humans. More specifically, in the context of the forest, it's inhabitants, and All of it's users, the use of herbicides negatively affects wildlife and hunters.

This webpage: <https://westernwildlifeecology.com/education/> has a slider titled "Species and Location" with examples of how the use of herbicides leads to genetic disruptions, malformations, and episodic die offs of wildlife.

Bighorn sheep die offs across the West are caused in large part because of these chemical applications. The same goes for the spread of CWD(Chronic Wasting Disease) in deer, elk, and moose.

CWD, a prion disease, has the the same epigenetic triggers that drive diabetes, as explained in this paper: <https://pubmed.ncbi.nlm.nih.gov/28159831/> This page explains herbicides, genetics, and diabetes:
<https://westernwildlifeecology.com/diabetes/>

Thank you, Independent Wildlife biologist and ecologist, Josh Leavitt
