Comments: Thanks for the opportunity to provide comments on this proposal. Although I have had limited time at Sweetwater Lake, my immediate reaction to hearing about the plans proposed was the concern over any evacuation route (s?) if a wild fire or other natural disaster would occur. Fire lately has been almost a constant risk in our area and that seems to have been ignored or minimized along with other disaster possibilities. Plus in trying to dig into some of the documents and other studies referenced, I was not successful given the volume and lack of information from what I could tell. Given the dramatic change this would be and the amount of information needed for a person to review and provide specific comments, it would be helpful to extend the comment period 60 days to allow for the gathering of the source documents.

Besides safety issues, from my understanding, the plan seems to also ignore raptor guidelines of the CPW. CPW has guidelines for breeding season and other related issues for a reason and at minimum, these should be followed.

It seems from my viewpoint, a lot more work and time needs to be put into any plan that would change Sweetwater Lake at such a scale.

Thank you for taking the feedback.
