Comments: I am asking that it be made PERMANENT, a wildlife and public safety closure on National Forest lands around the wildlife crossing structures along I-90 between Hyak and Easton. People should not be able to enter or hike in these areas, so that wildlife are not inhibited from entering them for safe passage over I-90! We need more areas with wildlife crossings, and we need to make this crossing as successful as possible. I have both a Bachelor Degree (Univ. of WA) and professional work experience in the fields of wildlife and environmental science, so I have an extra passion for these types of projects. Thank you for accepting my comment.
