Comments: I support Alternative 2. It upgrades existing infrastructure, but does not require additional water rights or increase authorized annual water use. The Environmental Assessment states that the project would remain within existing water allocations and that the majority of diverted water returns to the watershed as snowmelt. The new water storage tank would improve operational efficiency and provide additional on-site water storage that could support emergency wildfire suppression efforts. Given our climate challenges and wildfire risks, Alternative 2 is a responsible investment in both recreation and public safety.
