Comments: We just started to get the fish population to noticably increase..it would be unwise and cruel to roll back the regulations that are protecting the region's natural resources. Please don't pave the forest, allow more logging, rescind hunting regulations, decrease money and resources from the national parks. I have seen how fly fishing can positively impact a person's life and I pray that other generations will have the same access we have had...but I fear these changes proposed by the current administration will destroy what we have managed to protect.
