Comments: I have toured the Sweetwater Lake Recreation area extensively. The area lends itself well to proposal 2 , the proposed action. With removal of the antiquated cabins there is ample terrain for expanded camping facilities and the deciduous growth provides good privacy and helps maintain a visual barrier.

The movement to greatly diminish or remove public access is a very self-serving effort to create another exclusive private development area. This effort is one of the most NIMBY groups i have witnessed, especially in light of all the new and future development that has, is or will take place in the Sweetwater Valley.

Well planned recreational development will not markedly increase user numbers over the previous traditional use that the area has accomodated for many decades nor greatly impact the existing numbers regarding egress of the upper valley. The State of Colorado has a great record at developing campgrounds and is a good choice for management.

Please support the proposed action.

Thank you
