Last name: Griffin

Organization:

Title:

Comments: I neither support or fully oppose this operational camp and the permitting process. But I do have two comments concerning items that were not discussed in any of the documentation:

1. The document stated that the camp has operated under a permit from 1966 to 2008, yet it also states that it was operational up to the 2017 Frye Fire. That indicates there was an operational camp situation going on without a valid permit for nearly 10 years or more. That's not cool, and additionally those years should not be used by the biological/environmental consultants (SWCA) to bolster the argument in favor of continuing the permit. Just tell us how many years they operated under a permit. And by 'they' I guess that means the previous owners (although the new organization appears to have some history with the prior organization).

2. No where in the documentation is there any information about where the camp and facilities derive their water. There is mention about an existing septic tank (w/unknown leach field location/condition). They obviously are tied into a semi-developed spring to the south, but there is no discussion about that feature. Structures and infrastructure are considered private property, but the spring and water rights are public property, are they not? There should be some discussion about flow of the spring (gpm, historical records, etc), useage by the facility, and discharge amounts.
