Comments: "Helicopter Use in the Pusch Ridge Wilderness NEPA"

Az Game & Fish needs to go by the same rules as everyone else. Helicopters do not belong in the wilderness. G&F can fly near there now, but cannot land. That is enough for monitoring. Think what their budget is, if they can afford to hire helicopter time. Spend that money on hiring half a dozen grad students to do the ground work on foot.

Soon, quieter, fixed wing drones with good, live cameras will replace most of the work currently being done by manned helicopters. There is no need for noisy, full sized helicopters in the wilderness, except in the minds of some at G&F. Just introduce more sheep instead of spending so much to monitor the current ones.
