Comments: As a property owner of 40 acres in the S4 region (Parcel Number 55801003, Area 6000, STO LatLN, Lot 3 Subdivision Name DLM 170) my property is adjacent to the proposed Mitchell and Stateline alignments.

I totally support the most recent proposal to use the Poeville line to provide reliable bulk transmission capacity to the west Reno area. This is the most environmentally friendly manner and makes the most sense, being that there are already existing lines along this route. It will not destroy land in the Long Valley area, near Bordertown and will not cut the valley in half; destroying National Forests, wildlife, plant species and causing erosion.

It's always been my understanding that the policy of corridor sharing favors the placement of new transmission lines within or next to existing infrastructure and with your most recent decision, the Poeville alignment is the only option. It takes advantage of the routing within the existing transmission lines and reduces the miles across the National Forest System. Poeville alignment is the only sensible solution. I seriously hope it's approved.
