Comments: Atlantic Coast Pipeline Decision Objection

If you are going to allow this expensive and risky pipeline through the forests, you should use the original route. It is the shortest total pipeline route and will minimize the impacts on people and forest - 100 miles of reduced length. It would also reduce the costs to be passed on to ratepayers.

I still think the pipeline is a danger and a boondoggle to make money by forced profits, but if you are going to do it anyway, do it as best as you can.
