

TO WHOM IT MAY CONCERN,

Midas Gold Idaho's Stibnite Gold Project presents Idaho, particularly rural Idaho, with a huge economic and environmental opportunity. I am writing to encourage you to permit the project as quickly as possible.

The site is rich in gold deposits but it also has antimony, which was recently deemed a critical by the federal government. Antimony is used as a fire retardant and metal strengthener. It is used in everything from batteries, textiles, cell phones, plastics and cable sheathing. Right now, the U.S. doesn't have a domestic antimony mine. The Stibnite Gold Project could provide one-quarter of the American demand for antimony in the country. This is so important with the current tenuous trade relations in our country.

Thank you for your time and consideration.

Best Wishes, Gary Samson
