

Dear Ms. Jackson,

Thank you for the opportunity to provide my feedback as part of Midas Gold Idaho's public permitting process.

As the East Fork of the South Fork of the Salmon River that passes through Stibnite, it must travel by 10.5 million tons of old, spent ore deposits and tailings materials from decades of mining activity. As you can imagine, this degrades water quality in the river. Midas Gold Idaho will remove, reuse, and reprocess these tailings and waste rock, which your own draft environmental impact statement says will help the local ecosystem by reducing the high concentrations of metals that have leached into the water. In Chapter 4 of the draft EIS, it says removing legacy tailings and waste lowers concentrations of antimony and arsenic in the East Fork South Fork of the Salmon River (4.9-70).

This Stibnite Gold Project is a huge opportunity for Idaho. I am grateful for the tools the Forest Service has provided to review the DEIS and learn more about the project. These tools have given Idahoans sufficient time to comment. Please permit alternative 2 and continue moving the project forward so our citizens can reap the positive impacts.

Thanks Again,

Name: michael folk
