

Dear Permitting Officials,

I am writing to express my full support of Midas Gold Idaho and the Stibnite Gold Project. Midas Gold has shown they are committed to Idaho and want to take care of the environment. I hope you move forward and permit this project as quickly as possible.

As the East Fork of the South Fork of the Salmon River that passes through Stibnite, it must travel by 10.5 million tons of old, spent ore deposits and tailings materials from decades of mining activity. As you can imagine, this degrades water quality in the river. Midas Gold Idaho will remove, reuse, and reprocess these tailings and waste rock, which your own draft environmental impact statement says will help the local ecosystem by reducing the high concentrations of metals that have leached into the water. In Chapter 4 of the draft EIS, it says removing legacy tailings and waste lowers concentrations of antimony and arsenic in the East Fork South Fork of the Salmon River (4.9-70).

As the U.S. Forest Service and other state and federal agencies review the proposed plan and determine the course of action, I encourage you to consider and appropriately weigh the positive benefits Midas Gold will have on Idaho. We need to move this project ahead after the 60-day comment period. Alternative Two truly is a win-win opportunity for Idahoans and the environment.

Respectfully,

Name: Lawrence Murray
