

U.S.F.S. Officials,

I have been closely following Midas Gold Idaho's plans for several years. I am excited to finally have the opportunity to comment on their Draft EIS. Midas Gold Idaho presents a huge opportunity for the Gem State.

Salmon have been cut off from miles of high-mountain spawning grounds and rearing habitats since roughly 1938, when the East Fork of the South Fork of the Salmon River (EFSFSR) was diverted around the Yellow Pine Pit. The only way for salmon to reproduce is by stocking them in Meadow Creek, where spawning occurs. We need to do better. As part of Midas Gold's proposal in Alternative Two, the company would design and install a fish passageway to help connect fish to their native spawning grounds for the first time in decades. The passageway would be built using best practices learned from successful examples used around the world. And it would be constructed before mining even starts. Once mining at the Yellow Pine Pit is complete, Midas Gold would begin full restoration of the river, creating a long-term solution for salmon to spawn upstream. In the Draft Environmental Impact Statement, the U.S. Forest Service found that removing these historical barriers to migration will help local fish populations by increasing productivity.

There has been more than sufficient time to comment on the Stibnite Gold Project. I encourage the U.S. Forest Service to move the Stibnite Gold Project forward and adopt Alternative two as the preferred alternative.

Regards,

Name: Richard Moon
