

Greetings,

Projects like this prove that Jobs can be created while improving the Environment simultaneously. Permitting this mine will improve the wildlife, State, and lives of all of the people employed directly and indirectly by it. Delaying the mine means delaying the remediation of the site that is 8 decades overdue. If the state is important to you, your family, and your friends you need to permit this site!

Thanks.

P.S. At least do it for the Fish.
