Comments: Thank you for your solicitation of public input into the development of the east side portion of the Payette Lake Trail.

Considerable time has been spent by CIMBA members and others in determining the best possible route for this trail which will, in effect, make it possible to entirely circumnavigate Payette lake via a highland combination of existing roads and trails.

The new proposed route will necessarily need to cross Forest Service lands but by doing so will reduce the amount of new trail construction and utilize the existing Crestline trailhead parking infrastructure as well as part of the existing Exterra Trail and Yockwah Basin Rd. system.

This trail should be built and maintained as a non-motorized trail that will be open to all non-motorized users.

The Crestline/Fall Creek Trails are nearby and open to motorized users so this non-motorized trail will not negatively impact motorized recreation in the area.

The trail construction will be funded through a variety of sources including grants and donations, and that it will be a great opportunity to get involved with local volunteer organizations in public-private partnerships.

Again, thank you for soliciting public input and for considering this exciting opportunity to enhance recreational opportunities for McCall residents and visitors alike.
