

Thank you for the opportunity to comment on the SDEIS for the Stibnite Gold Project. This project is important for Idaho's future and our nation's future. Perpetua Resources has a plan to leave the site better than they found it and produce antimony, a mineral we need for our national defense and clean energy future.

The Biden administration has set an ambitious goal to have a clean energy grid by 2035. We cannot meet that goal without antimony. Antimony is used to make solar panels, wind turbines and large-scale batteries. Currently, we do not have a domestic source of this critical mineral. The Stibnite Gold Project would provide America with a secure and sustainable source. In fact, the project could satisfy 35% of America's antimony needs and help support our clean energy future. Perpetua Resources has already agreed to provide enough antimony to Ambri to help the battery manufacturer power 1 million homes with solar power. I believe the minerals from the Stibnite Gold Project can be used to help us protect our environment and I trust in the company's plans to minimize environmental impacts during mining and restore the site when they are done.

Perpetua Resources wants to restore the rivers, wildlife and habitat near the Stibnite Gold Project site. We should let them, especially considering the permitting process has worked and helped the company identify how to improve water quality and temperature in the SDEIS. Please permit the Stibnite Gold Project and continue to move this important project forward.
