

I have been closely following Perpetua Resources' plans for several years. The Stibnite Gold Project presents an opportunity to restore an abandoned mine site and provide our nation with the critical minerals we need. I am grateful for the opportunity to comment on their SDEIS.

The Stibnite Gold Project would secure America's only source of antimony. Today, we predominately rely on China and Russia for this critical mineral, which is concerning given its importance. Antimony is used heavily in national defense applications, including everything from munitions to military uniforms. It is also key to the clean energy transition. In fact, Perpetua Resources plans to supply antimony to large-scale battery maker Ambri, so they can commercialize their technology. The antimony from Stibnite could help power approximately 1 million homes with solar power for the battery's 20+ lifespan. I support the Stibnite Gold Project using the Burntlog route because I want to help America reach our clean energy goals and remain a safe country.

The Stibnite Gold Project is important to Idaho, our national security and clean energy future. Regulators have been reviewing the project for the past 6 years. This time has allowed the project to improve and, now, I encourage you to permit the project as quickly as possible.
