

Thank you for the opportunity to comment during the Supplemental Draft Environmental Impact Statement period for the Stibnite Gold Project. This project could help stop our import reliance on China and Russia for antimony and improve environmental conditions at an abandoned mine site. It is important to me to see this project move forward.

Thanks to Perpetua Resources' agreement with Ambri, the Stibnite Gold Project will enable the production of batteries with over 13 Gigawatt hours of clean energy storage. That is more than 8x the total additions to the entire U.S. energy storage market in 2020. With no current domestic source of antimony, the Stibnite Gold Project is not an opportunity we can let pass us by. I have reviewed the company's improved plans using the Burntlog Route and I believe they've outlined a path to protect the environment and minimize impacts. The Stibnite Gold Project should be allowed to move forward.

Perpetua Resources wants to restore the rivers, wildlife and habitat near the Stibnite Gold Project site. We should let them, especially considering the permitting process has worked and helped the company identify how to improve water quality and temperature in the SDEIS. Please permit the Stibnite Gold Project and continue to move this important project forward.

Gary Gorski
