

I am writing in support of the Stibnite Gold Project and the benefits it will bring to Idaho. This project has the potential to put hundreds of Idahoans to work, bring a \$1 billion investment into our state and restore an area of Idaho's backcountry desperately in need of repair. Today, fish cannot swim past the Yellow Pine pit and heavy metals are leaching into the ground and surface water. The Stibnite Gold Project can leave the conditions better than they are today.

The Stibnite Gold Project would secure America's only source of antimony. Today, we predominately rely on China and Russia for this critical mineral, which is concerning given its importance. Antimony is used heavily in national defense applications, including everything from munitions to military uniforms. It is also key to the clean energy transition. In fact, Perpetua Resources plans to supply antimony to large-scale battery maker Ambri, so they can commercialize their technology. The antimony from Stibnite could help power approximately 1 million homes with solar power for the battery's 20+ lifespan. I support the Stibnite Gold Project using the Burntlog route because I want to help America reach our clean energy goals and remain a safe country.

Let Idahoans see the benefits of the Stibnite Gold Project. The USFS has reviewing the project for the last six years. During this time, the company has reduced the project size by 13% in the SDEIS, decreased maximum water temperature to keep it at or below baseline conditions and eliminated the need for long-term water treatment. The review process is working and now we need regulators to advance the project as expeditiously as possible.
