

Thank you for the opportunity to provide feedback on the Stibnite Gold Project as part of Perpetua Resources' Supplemental Draft Environmental Impact Statement. Public participation is a huge part of the permitting process and I appreciate the opportunity to share my thoughts, especially because the Stibnite Gold Project will leave conditions at the site better than they are today.

Restoring the Stibnite Gold Project site will be an incredible investment. Work clearly needs to be done in the area but it should not be funded through taxpayer dollars. Fortunately, Perpetua Resources wants to make the investment. The company is proposing a mining project and full-scale restoration project. They have plans to reconnect fish with their natural spawning grounds. Perpetua will also improve water quality and temperature. After the comments from the DEIS were analyzed, the company recognized it could do more in those areas. They added wider and taller riparian vegetation plantings around stream channels, as well as including a widened and deepened portion of the East Fork of the South Fork Salmon River Channel in the Yellow Pine pit backfill. The company will also solve sedimentation issues by repairing Blowout Creek.

Reviewing Perpetua Resources' improved plans it is clear to me the company really believes in taking care of the environment and keeping the community safe. That is why they reduced water temperatures, improved water quality and shrunk the project footprint by 13 percent. I urge you to trust in your own review process and permit the Stibnite Gold Project.
