

America desperately needs antimony. This mineral is used in munitions, large-capacity storage batteries, fire retardants and more. Currently, we are entirely dependent on foreign countries to provide this mineral, which is why I am writing in support of the Stibnite Gold Project. This project can stop our import reliance on antimony.

The Biden administration has set an ambitious goal to have a clean energy grid by 2035. We cannot meet that goal without antimony. Antimony is used to make solar panels, wind turbines and large-scale batteries. Currently, we do not have a domestic source of this critical mineral. The Stibnite Gold Project would provide America with a secure and sustainable source. In fact, the project could satisfy 35% of America's antimony needs and help support our clean energy future. Perpetua Resources has already agreed to provide enough antimony to Ambri to help the battery manufacturer power 1 million homes with solar power. I believe the minerals from the Stibnite Gold Project can be used to help us protect our environment and I trust in the company's plans to minimize environmental impacts during mining and restore the site when they are done.

This project is a huge opportunity for Idaho. After 6 years of intense review, I encourage the U.S. Forest Service to permit the 2021 Modified Mine Plan so this brownfield site can finally be restored.
