

This letter is to express my support of Perpetua's Stibnite Gold Project. America needs this project to be permitted. It would produce our country's only source of antimony, a mineral we need for a secure and sustainable future. I hope after reading my thoughts you will understand why my support for this project is so strong.

Perpetua Resources has made it clear reclamation efforts will start alongside operations. For example, before mining ever begins, fish will be reconnected to their native spawning groups upstream through a fish passageway. Perpetua Resources also identified more ways to help fish populations. Originally, the company proposed not replacing the pit lake at the Yellow Pine Pit, however, a pit lake is included in the 2021 Modified Mine Plan to make sure currently used habitat is replaced and available for the fish that use it today. The company is also adding more plantings along waterways to reduce water temperatures for fish. Perpetua also has proposed using Burnt Log Road in order to keep vehicles away from precious waterways. I am impressed by the improvements the company made to its plan based on public feedback.

As the U.S. Forest Service and other state and federal agencies review the 2021 Modified Mine Plan and determine the course of action, I encourage you to consider the positive benefits Perpetua Resources will have on Idaho, especially now that the company has reduced its environmental footprint and made further improvements to water quality. This truly is a win-win opportunity for Idahoans and the environment. After years of careful scrutiny by regulators and the community, it is time for us to make these benefits a reality.

Peggy Theobald
