

This letter is to express my support of Perpetua's Stibnite Gold Project. America needs this project to be permitted. It would produce our country's only source of antimony, a mineral we need for a secure and sustainable future. I hope after reading my thoughts you will understand why my support for this project is so strong.

I support the 2021 Modified Mine Plan of the SDEIS. Under this plan, Perpetua Resources will help mitigate the damages left by previous mining projects, bring hundreds of well-paying jobs to Valley County and provide the only domestically mined source of antimony in the country. This project would allow our nation to rely less on foreign countries for critical minerals and reduce our carbon footprint by sourcing minerals at home. Environmental regulations are stricter in the United States and when minerals are sourced in this country we do not have to expend as much energy and resources transporting them to their final destination. The 2021 Modified Mine Plan is economically and technically feasible. It also improves upon the company's originally submitted plans. With the new updates, Perpetua has eliminated the need for long-term water treatment, kept water temperatures on site at or below current temperatures, improves water quality and shrinks the size of the project footprint by 13 percent. It is clear it is the best choice moving forward.

I encourage the U.S. Forest Service to move the Stibnite Gold Project forward, especially now with the further improvements to water quality conditions on site. This is just one example of how the permitting process has worked to improve the plan.
