

Thank you for the opportunity to provide feedback on the Stibnite Gold Project as part of the NEPA Comment Period. I have been closely following Perpetua Resources' plans since they first came into our state, in large part because some of the proposed project will take place on public land. The more I have learned about the project, the more excited I am about the possibilities. The Stibnite Gold Project could help us restore an abandoned mine site.

Thanks to Perpetua Resources' agreement with Ambri, the Stibnite Gold Project will enable the production of batteries with over 13 Gigawatt hours of clean energy storage. That is more than 8x the total additions to the entire U.S. energy storage market in 2020. With no current domestic source of antimony, the Stibnite Gold Project is not an opportunity we can let pass us by. I have reviewed the company's improved plans using the Burntlog Route and I believe they've outlined a path to protect the environment and minimize impacts. The Stibnite Gold Project should be allowed to move forward.

After reading my letter, I hope you can see why you should permit the Stibnite Gold Project. This project is a good thing for Idaho, helps decrease America's dependence on foreign countries for a critical mineral and cleans up the environment. The company also continued to refine its plan in response to the permitting process, so it has the smallest footprint possible and results in improved water quality conditions on site.

Dawn Humphrey
