

This letter is to express my support of Perpetua's Stibnite Gold Project. America needs this project to be permitted. It would produce our country's only source of antimony, a mineral we need for a secure and sustainable future. I hope after reading my thoughts you will understand why my support for this project is so strong.

There are many checks and balances in place to ensure Perpetua Resources follows through on its promises to restore the site. In fact, the company is required by law to set aside all of the money it needs for restoration before mining can begin. However, I am not worried about Perpetua staying true to its word. The company has already started restoration work at the site. They have planted more than 60,000 trees to help reduce the amount of sediment going into the river, installed solar energy panels at site to reduce greenhouse gas emissions and improved miles of road along the river to protect fish habitat. However, what's more impressive to me is the changes the company has made following the comments they received on the DEIS. They took the feedback from stakeholders to heart and looked at ways to further improve the plan. In the 2021 Modified Mine Plan, the company has eliminated the Fiddle Development Rock Storage Facility, which shrinks the footprint by 168 acres, the size of the Hanger Flats pit was reduced by 70%, mined material was reduced by 10% and there is no longer the need for long-term water treatment. With the additional improvements, I feel strongly that the project should move forward – especially because it would allow us to secure a domestic source of antimony.

The Stibnite Gold Project is the type of project our state needs. It has been in regulatory review for the past six years. During this time, public comments and scientific analysis has helped to improve the plan. But now it is time to move it forward. I highly encourage the U.S. Forest Service to permit this project, using the 2021 Modified Mine Plan presented by Perpetua Resources in the SDEIS, as expeditiously as possible.
