

Perpetua Resources' Stibnite Gold Project presents Idaho, particularly rural Idaho, with a huge economic and environmental opportunity. The company has a plan to improve water quality, wetlands and the river and leave the site better than it is today. I am writing to encourage you to permit the project as quickly as possible.

I support the 2021 Modified Mine Plan of the SDEIS. Under this plan, Perpetua Resources will help mitigate the damages left by previous mining projects, bring hundreds of well-paying jobs to Valley County and provide the only domestically mined source of antimony in the country. This project would allow our nation to rely less on foreign countries for critical minerals and reduce our carbon footprint by sourcing minerals at home. Environmental regulations are stricter in the United States and when minerals are sourced in this country we do not have to expend as much energy and resources transporting them to their final destination. The 2021 Modified Mine Plan is economically and technically feasible. It also improves upon the company's originally submitted plans. With the new updates, Perpetua has eliminated the need for long-term water treatment, kept water temperatures on site at or below current temperatures, improves water quality and shrinks the size of the project footprint by 13 percent. It is clear it is the best choice moving forward.

Let Idahoans see the benefits of the Stibnite Gold Project. The USFS has reviewing the project for the last six years. During this time, the company has reduced the project size by 13% in the SDEIS, decreased maximum water temperature to keep it at or below baseline conditions and eliminated the need for long-term water treatment. The review process is working and now we need regulators to advance the project as expeditiously as possible.
