

Thank you for the opportunity to provide feedback on the Stibnite Gold Project as part of the National Environmental Policy Act. I believe the project can help stop America's import reliance on antimony and address legacy impacts in the historic Stibnite Mining District. I hope my letter will help as you evaluate the recently published SDEIS.

Salmon have been cut off from miles of high-mountain spawning grounds and rearing habitats since roughly 1938, when the East Fork of the South Fork of the Salmon River was diverted around the Yellow Pine Pit. We need to do better. Fortunately, Perpetua Resources plans to design and install a fish passageway to help connect fish to their native spawning grounds before mining even begins. While skeptics have questioned whether or not the passageway would work, the SDEIS concludes it will provide passage for all four special status fish species at Stibnite. And, once mining at the Yellow Pine Pit is complete, Perpetua would begin full restoration of the river, creating a long-term solution for salmon to spawn upstream. This is just one of the benefits of the preferred alternative.

I encourage the U.S. Forest Service to move the Stibnite Gold Project forward. The permitting process is designed to advance the best plans possible. I believe the work of regulators over the past six years is proof this is what is happening with the Stibnite Gold Project. The thorough review process has been beneficial but there should be no more delays. The project should move forward in a timely manner.
