

I have been closely following Perpetua Resources' plans for several years. The Stibnite Gold Project presents an opportunity to restore an abandoned mine site and provide our nation with the critical minerals we need. I am grateful for the opportunity to comment on their SDEIS.

Everyone who cares about Idaho's fish populations should take notice of some of regulators' conclusions in the SDEIS. Importantly, the SDEIS states by providing volitional passage for fish, Perpetua will have a beneficial impact on fish populations within the vicinity of the mine. Right now, the abandoned Yellow Pine Pit currently blocks fish access to the East Fork of the South Fork of the Salmon River. Fish will continue to be blocked from high quality habitat unless we let Perpetua Resources move forward with its plan. We should allow Perpetua Resources to mine at Stibnite, so we can help fish, secure American supply chains and provide family-wage jobs to Idahoans.

The Stibnite Gold Project is the type of project our state needs. It has been in regulatory review for the past six years. During this time, public comments and scientific analysis has helped to improve the plan. But now it is time to move it forward. I highly encourage the U.S. Forest Service to permit this project, using the 2021 Modified Mine Plan presented by Perpetua Resources in the SDEIS, as expeditiously as possible.
