

Perpetua Resources' Stibnite Gold Project presents Idaho, particularly rural Idaho, with a huge economic and environmental opportunity. The company has a plan to improve water quality, wetlands and the river and leave the site better than it is today. I am writing to encourage you to permit the project as quickly as possible.

Salmon have been cut off from miles of high-mountain spawning grounds and rearing habitats since roughly 1938, when the East Fork of the South Fork of the Salmon River was diverted around the Yellow Pine Pit. We need to do better. Fortunately, Perpetua Resources plans to design and install a fish passageway to help connect fish to their native spawning grounds before mining even begins. While skeptics have questioned whether or not the passageway would work, the SDEIS concludes it will provide passage for all four special status fish species at Stibnite. And, once mining at the Yellow Pine Pit is complete, Perpetua would begin full restoration of the river, creating a long-term solution for salmon to spawn upstream. This is just one of the benefits of the preferred alternative.

Perpetua Resources wants to help America secure a domestic supply of the critical mineral antimony and clean up a brownfield site. They've made great improvements to the project from the original documents they submitted – this shows the permitting process has done its job. It is time to permit the Stibnite Gold Project and continue to move this important project forward.
