

It is with great pleasure that I write to the U.S. Forest Service to encourage you to permit the proposed activities outlined by Perpetua Resources during this public input process. This project could help restore Stibnite, secure an American source of antimony and strengthen our nation's supply chains.

In reviewing the SDEIS, it is clear to me Perpetua has been thoughtful on how to minimize its impacts during mining. For example, the company is going to construct a passageway to reconnect fish to upstream habitat before mining even begins. Fish have not been able to swim past the Yellow Pine pit for more than 80 years. The analysis in the document says this will help limit the impacts of habitat reduction for fish. We need the minerals from the Stibnite Gold Project and I believe the company has demonstrated they can mine safely and protect the environment.

Perpetua Resources wants to help America secure a domestic supply of the critical mineral antimony and clean up a brownfield site. They've made great improvements to the project from the original documents they submitted – this shows the permitting process has done its job. It is time to permit the Stibnite Gold Project and continue to move this important project forward.
