

The Stibnite Gold Project presents a big opportunity for Idaho. Without this project, the conditions at Stibnite will likely never get better. Fish will continue to be blocked from their spawning grounds by an abandoned mine pit and legacy tailings will continue to degrade water quality. The project also presents an opportunity for America. It could help secure a domestic source of antimony, so we can stop our import reliance on this critical mineral. This is an important project and I appreciate the opportunity to provide my feedback as part of Perpetua Resources' public permitting process.

America needs antimony and gold. We need to strengthen our supply chains and bring mining home. I know people are concerned about mining's impacts on the environment but regulators identified Perpetua Resources refined plan as it preferred alternative because they determined the company could mine while minimizing impacts on the environment and communities. One of the ways the company does that is by using Burntlog Road. This reduces the number of stream crossings for mine traffic compared to the Johnson Creek Route, reduces the chances of accidents with recreationalists and minimizes the impacts of potential spills. By keeping traffic away from river crossings, it also lowers sedimentation impacts from mining.

I encourage the USFS to move the Stibnite Gold Project forward and permit Perpetua Resources' project as outlined in the 2021 Modified Mine Plan. At this point, the Stibnite Gold Project has been studied by regulators for the last six year. That is enough. Now, it is time to let Perpetua get to work.
