Title:

Comments: Dear sirs:I am a permittee in the South Silver Lake cabin tract, #15 at 30571 West Lake Rd.My request is that you include, in your planning project, the removal of the high amount of combustible fuel in the national forest in the area below the turn-off for Plasse's resort from highway 88. Visible from the road down off highway 88 there is lot of downed lumber and slash below the turn-off, and this appears to be an area of highly combustible matter. This presents a severe fire danger and had been threatened by the Caldor fire two years ago. It threatens the entire cabin tract, the private housing by Plasse's Resort, Plasse's Resort itself and Stockton Summer Camp. Because it is a severe fire risk, it threatens the escape route for all the individuals below the highway and thus is a risk to human life in event of a fire. Please make plans to remove the excessive fire risk this presents to the area. Sincerely, Michael Griffith
