Comments: In 2014 we wrote resolutions and did petitions against pesticides. We also did a facebook page Alaskans Stand Against Pesticides (ASAP) it all seemed to work until this year as you are pushing for pesticides. The chemical companies are just luring you with creating jobs to use their CHEMICALS. Prince of Wales has the best fishing I would stand to argue it is because we have pushed back against pesticides. In 2014 we dug out roots on bull thistle and where we dug they have not come back. I came here in 2008 and love this land. I drive by where we dug and they are not patches of Bull thistle. I can go on and on, but please cease and desist and we have resolutions against the use of pesticides on this island. We are an unorganized borough and I believe we control what happens on this island. These pics were our efforts. I have tons! of pics with the community
