First name: Staci

Last name: Baker

Organization:

Title:

Comments: Do not spray herbicide it gets into the ground and the ground water. This is an extremely sensitive area. This is damaging pollinators and having large ecological detriment.

Do not remove strands of trees that survived the Caldor fire and do not do any more thinning a healthy Forest is fire resistant. The US Forest Service seems to be about selling off logging to raise money. This is wrong. You are making our planet hotter. you are making our neighborhoods hotter. You are just acting for economic benefit for yourselves not protecting the wildlife that need these plants. Why the heck you would put poison out when there's wildlife and pollinators is really mind blowing

Respect, species, bio diversity, cedar trees, and riparian areas
