Title:

Comments: Leave Wilderness as Wilderness. I am very dissappointed in the displays and information and received. My major concern is

a) any reduction in wilderness designation will negative effect water quality wildlife habitat and wildlife survival and sustainability of our resources.

b) I want to see and am shocked NOT to see scientific reviews and scientific designation of critical and desireable habitats and focal species. How peoplw feel without considering data and data on climate management practices considering climate change effects is wartless for future survival.

b) What are the key ecological principles for any charges in this proposal. It appears collaboration of appointed parties have resulted in disregard for wilderness and species survival.
