Comments: Concern 60mph winds off Peavine

Health Concerns & ringing in ears

Are the metal poles conductive.

Re: my property @220 copperfield Drive will be surrounded by electrical lines on 3 sides.

RE: my property @220 copperfield Drive Reno 89506.

I have a concern of the gusts of 60 mph plus winds coming down off of Peavine Mountain toward the freeway that the powerlines and/or poles are not blown down the hill onto My house, and start a fire and/or destroying my fencing +/- property. I am concerned about how they the poles will look; the Alturas line along 395@ Lemmon Vly and Golden Valley green paint is chipping off and ugly. I am concerned about the endangered species and tree removal especially the Flammulated Owl and conifers and Aspen. The high pitched sound from the Alturas Line causes ringing in my ears, after I have turned off the TV, radio to go to bed, I hear ringing in my ears overnight, making sleeping difficult, ever since the Alturas line went in. Will Lines detach front poles in winds and gusts. Lightning strike failure, structural failure, start FIRE! ARE THE LINES GOING TO BE FAR ENOUGH APART TO NOT SLAP TOGETHER?

HEALTH risks with electromagnetic lines causing cancer EMC can wash out radio emergency broadcasts warning weather or fire; the white noise drowns out radio frequency/frequencies.
